

Blue Paper – Technical Architecture

Deep Dive into the 38-Bridge Credential Grid & Bio-Sign™ Protocol

REALAIID Bureau • Solomon Kin, LLC

Version 1.0 • June 2026

Executive Summary

The REALAIID 38-Bridge Credential Grid, powered by the **Bio-Sign™ Marrow-Locked Authentication** protocol, creates a sovereign, cryptographically verifiable identity layer that solves the Temporal Verification Void in the post-NO FAKES Act era.

The 38-Bridge Credential Grid (Key Highlights):

- **B-01 Auth Root** — Primary sovereign identity anchor
- **B-19 Bio-Sign** — Marrow-locked biometric verification (core protocol)
- **B-33 Benthic Pulse** — Acoustic defense for submerged infrastructure
- **B-39 Identity Vault** — Master encrypted credential storage

Full bridge list (B-01 through B-39) is detailed in the PDF with descriptions of each bridge's function and interoperability.

Bio-Sign™ Protocol Deep Dive:

- Marrow-locked physiological signals (vascular, thermal, frequency)
- Stylized hashing with zero raw data exposure
- Real-time liveness detection
- Integration with the full grid via Handshake Knot™
