Capability Statement

Institutional Overview for Grantors & Strategic Partners

June 2026

Mission

To establish sovereign, biologically-anchored digital identity as the global standard for genuine presence in the age of AI.

Core Innovation

Bio-Sign™ Marrow-Locked Authentication + Handshake Knot™ Protocol + 38-Bridge Credential Grid

Key Capabilities

- Real-time verifiable **genuine presence** using stylized, zero-raw-data biometric hashing
- Full integration across fiscal, civic, maritime, and sovereign infrastructure
- Privacy-first design (BIPA, GDPR, CCPA compliant by architecture)
- Alignment with NIST SP 800-63, NO FAKES Act, and MARSEC standards
- Operational deployment via REALAiID sovereign node and maritime/port solutions

Technical Backbone

- 38 specialized bridges (Auth Root, Bio-Sign, Benthic Pulse, Fiscal Root, etc.)
- Immutable forensic logging and zero-trust architecture
- \$AI Compute Economy for machine-to-machine value transfer

Strategic Value

REALAiID provides the missing infrastructure layer for secure digital identity, fraud reduction, and sovereign data control in a post-AI world.

Current Status

- 100% completed Philadelphia Mainframe (PHL-01)
- Active maritime pilots (EmbarkSecure™, SentryBoard™)
- Ready for technical reviews, grant partnerships, and enterprise pilots

Call to Action

We invite qualified grantors, government agencies, and strategic partners to schedule a technical briefing or pilot program.
